Special Tips

DTG: The amount of pre-treat used on fabric blends might differ of the amount used on 100% cotton.
SUBLIMATION: Best results on 100% polyester, use it preferably on white or light colors.
 Use 50% polyester blends or higher for vintage and faded prints. Always check temperature settings to avoid melting of polyester.

Fiber content varies by color, see color list for exceptions on page 3.

SMART FOR BUSINESS

Running a successful business means always thinking of smart ways to make your customers happy. At Blanks maker, we get it, and we're here to help.

We're committed to bringing you high-quality, affordable garments in a range of styles, sizes, colors and fits. So no matter what, you always have the flexibility to find what you need when you need it.

It's why we're always looking for smarter ways to bring you even more value. Your business is our business. Which is why we'll never stop finding new ways to help you.

It's not just the right choice, it's the smart choice.

DECORATOR'S

HEAT TRANSFER / DTF

Heat transfer involves combining heat and pressure to transfer images to garments. This is a great option for detailed prints, customization, shorter runs and quick turn around times.

DIRECT TO GARMENT

Direct to garment printing (DTG) is printing on textiles using ink jet technology which usually utilizes specialized water-based inks. DTG is particularly effective for short runs, full color printing, or for reproducing fine detail.

EMBROIDERY

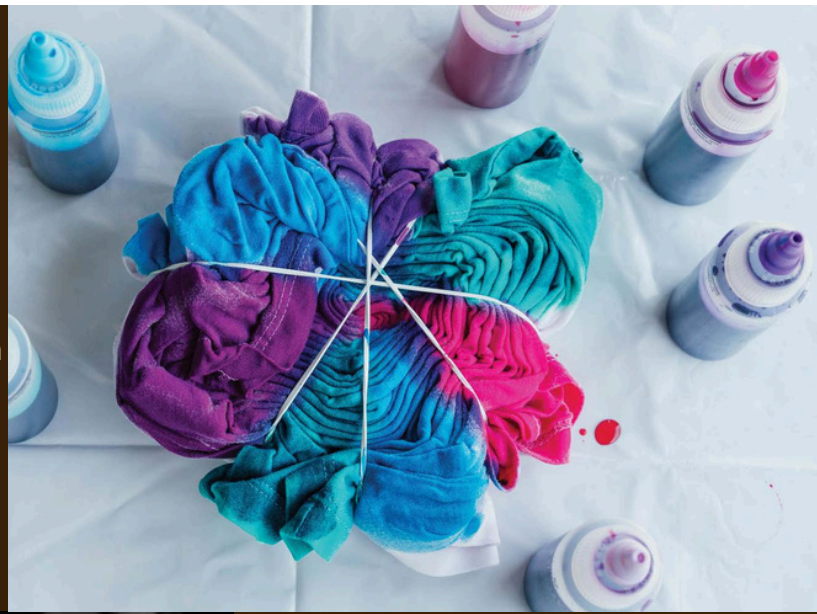

Embroidery is sewing a design, type or logo onto a garment with special thread. This technique gives garments a higher perceived value and works particularly well on heavier weight garments such as fleece.

TECHNIQUES

TIE DYE

The tie dye directions or technique typically consists of stitching, folding, twisting, pleating, or crumpling fabric or a garment and binding with string or rubber bands, or even clamps which is followed by dyeing.

SUBLIMATION

Sublimation printing is a digital process that uses heat and pressure to turn inks into gas, which then penetrates materials for a permanent imprint. This method results in high-quality, vibrant prints that are less prone to cracking or fading.

SCREEN PRINT

Screenprinting (or silk screening) is a technique that uses stencils and ink to create designs on garments. It is the most economical method for producing large quantities that involve cotton or cotton-blend garments.
